

KC SERIES WEATHERSTRIP

Product Highlights

Our KC500 “Wedge” style weatherstrip is a popular selling, professional grade door weatherstrip. This weather-stripping features a medium-duty extruded aluminum carrier that has notched sides for better fit, and fast, accurate, trouble-free installation. The triangular Santoprene™ sealing gasket commonly referred to as “The Wedge™”, has proven to be more effective in sealing large and small gaps than vinyl bulb type weatherstripping. Unlike vinyl bulb weather-strip, The Wedge Santoprene™ sealing gasket stays pliable in sub-zero temperature and will not crack, shrink, become brittle or stiff. This weatherstrip needs no caulking because of its back seal a feature not found on other brands. Seals drafts on large and small gaps alike. Works well on warped and inconsistent doors. May be used on new or old residential or commercial doors. Slotted screw holes for easy adjustment; includes Phillips-head screws.

Product Details

- Large sealing gasket insulates, seals out drafts, light, and sound
- Works on even the most inconsistent gaps up to ¾”
- Unique back seal replaces the need for caulking
- Santoprene™ sealing gasket will not stick to painted surfaces and remains pliable in sub-zero temperatures
